X527_M7Random1
X528_M7Random2
X529_M7Random3
X530_M7Random4

The random assignments match up with condition sequences as follows:
1=blood pressure
2=diabetes
3=lung
4=heart
5=kidney
6=depression

Other section variables needed:
C006 (blood pressure medication)
C011 (diabetes medication)
C032 (lung disease medication)
C037, C042, C046, C050, C282 (heart medications)
C271 (for depression)
A019 (age)
N352 (Medicare Part D coverage)

7 permanent calculated variables created as follows:
Calculations: Create 6 indicators for whether R is taking medications for each of the 6 conditions (1 if yes, 0 if no). Then sum the indicators to generate a count of the number of conditions for which R is taking medications.
