## 1. Overview and Acknowledgments

The Health and Retirement Study (HRS) is a national longitudinal study of the economic, health, marital, and family status, as well as public and private support systems, of older Americans. The HRS is a rich source of longitudinal, cross-sectional data for researchers and policymakers who study aging. Funding for the Health and Retirement Study is provided by the National Institute on Aging at NIH (U01 AG009740), with supplemental support from the Social Security Administration. The study is conducted by the Institute for Social Research (ISR) at the University of Michigan.

The HRS gratefully acknowledges the special assistance of the Social Security Administration's Office of Research and Statistics for their assistance in retrieving the administrative records of HRS respondents who gave consent for those records to be used for research purposes.

## 2. Obtaining the Data

### 2a. Access to Restricted Data

Although most HRS data sets are available to the public without restriction, certain HRS data sets contain sensitive respondent information and are only available under terms of a formal agreement negotiated between the researcher and HRS. Prospective users of HRS restricted geocode data have two access options:

- [Virtual Desktop Infrastructure](#) (recommended)
- Traditional Licensing Agreement (deprecated)

For instructions on how to proceed, visit the [HRS Restricted Data](#) page or contact the HRS Restricted Data Applications Processing Team ([hrrsdaapplication@umich.edu](mailto:hrrsdaapplication@umich.edu)) by email.

### 2b. Restricted Data Agreement

This restricted data set is intended for exclusive use by you and the persons specified in the *Confidentiality Agreement for Use of Restricted Data from the Health and Retirement Study*. Traditional licensing agreements that include multiple users are also bound by the *Supplemental Agreement with Research Staff for Use of Restricted Data from the Health and Retirement Study*.

## Appendix A: Cohort Permission Status

### A1. Source Information

The *SSI Records* dataset is based on prospective permissions received:

- In 2006 for respondents interviewed enhanced face-to-face
- In 2008, 2010, 2012, 2014, 2016, 2018, 2020, and 2022 for enhanced face-to-face (EFTF) interview respondents who were not asked previously or refused or were non-response. EFTF respondents were also asked if their prior consents had expired.

Each new record set obtained from SSA reflects the most recent information available; therefore the latest version of *SSI Records* will always be the most accurate. Going forward, if current information for a given respondent is missing, the most recent data elements from past datasets will be used.

### A2. Information Received from SSA in Fall 2025

<i>Consent Wave</i>	<i>Summary Earnings</i>	<i>Detail Earnings</i>	<i>Benefits (MBR and PHUS)</i>	<i>Form 831 SSI</i>

### A3. Limits for Information Obtained Through Respondent Consent Forms

1. Prior to 2006, respondent permissions were based on separate agreements between HRS and SSA. This meant that information was obtained only for the time period and respondent cohort(s) covered by the agreement.
2. In 2006 the terms of the consent form were altered, allowing HRS to obtain updates of earnings and benefits data for all years up to and including the current year. The term of these consents was defined as year of signing through 2030.
3. In 2018 the respondent consent form<sup>1</sup> MOA terms were revised, limiting earnings permissions to year of signing through Survey Year + 6, and benefits permissions to year of signing through Survey Year + 12.
4. In future years, post-2004 respondents will need new earnings/benefits data consents once their Survey Year + 6/+12 anniversary has been reached.

<sup>1</sup> In 1998 through 2014, HRS-SSA agreements included provisions for obtaining benefits and earnings information for deceased spouses. The deceased spouse option was dropped in 2016.
